

1 Gig System Memory Requirement (RAM)– How tell if you have enough RAM

Keywords: XP; memory; RAM; Windows; Microsoft; upgrade; critical; check; verify; error; problem; Vista

Introduction (Please Read):

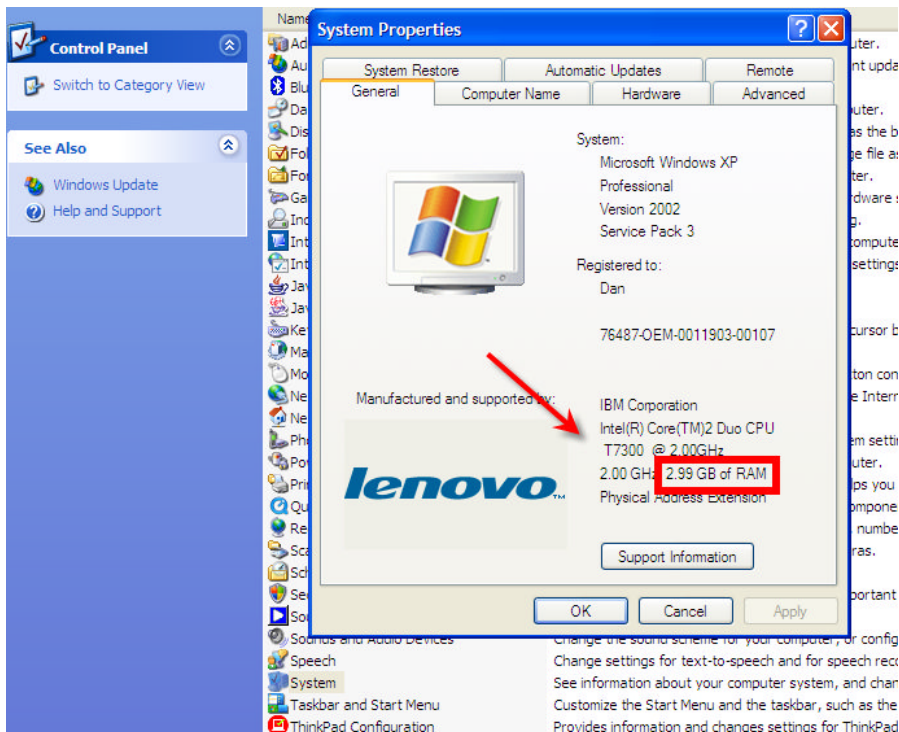

This document is intended to walk you through a few steps on how to verify if you have at least 1 gigabyte of RAM (Random Access Memory) installed on your computer which is essential for your program to run properly.

Step 1: Click on the Start button and select Control Panel

Step 2: Once in the Control Panel, open the System program

Step 3: When the System program opens you will be able to see if your computer has at least 1 Gig of RAM Installed.

Step 4 – If you do not have enough RAM, contact your local IT professional and have them upgrade your computer.
